

# Marine Pile Fenders

PsG Marine Pile fenders provide an effective way to protect steel or concrete piles from barge traffic. They are pre-curved to suit the required diameter pile and degree of coverage needed. These pile wrap fenders are clamped to a pile depending on the project requirements. Model Marine Pile half cylindrical Fenders are manufactured in pre-curved units ready to install.

The PsG Marine Pile half cylindrical Model can be clamped to steel dolphin piles, or to concrete piles. There are different softness to satisfy particular design requirements. Area of coverage depends upon batter and number of piles in cluster. Applications include, but are not limited to: ferry landings, barge mooring dolphins, bridge foundations and landing dolphins.

Easy to install, easy to combine the different length needed, they rapidly becoming the ideal fender choice for piles.

Dimensions					
ID Radie	OD	H	M	L Max length	Weight kg / meter
